PROFESSIONAL SUMMARY

QA Engineer with 3.2+ years of experience specializing in AI QA methodologies, LLM validation and automated framework engineering. Experienced in building robust test infrastructure from scratch using Selenium, Java, and Cucumber BDD, alongside modern frameworks like RAGAS for evaluating retrieval-augmented generation systems. Strong track record verifying web, mobile (iOS & Android), and backend API applications following standard STLC/Agile processes. Proven success in executing comprehensive end-to-end testing cycles, managing defect tracking, and validating complex cloud integrations to ensure high-quality software deployments.

TECHNICAL SKILLS

AI Testing & Frameworks: RAGAS Framework, LLM Output Evaluation (Answer Relevancy, Context Precision, Faithfulness), Chatbot Response Validation, Grounding & Hallucination Control

Automation Testing & Frameworks: Selenium WebDriver, TestNG, Cucumber BDD, Page Object Model (POM), Maven

Programming Languages & tools: Java, Gherkin, VS Code, IntelliJ, Eclipse

Testing Methodologies & Types: SDLC, STLC, Agile/Scrum, Waterfall, UAT, Functional, Smoke, Integration, Sanity, Regression, End-to-End, GUI, Ad Hoc, Exploratory, Bug Life Cycle

API & Web Services Testing: REST API, Postman, Swagger

Mobile & Platforms Testing: Mobile App Testing (Android & iOS), Cross-Browser Testing (BrowserStack, LambdaTest)

Bug Tracking & Tools: Jira, Mantis, TestRail, ,Allure Reporting

PROFESSIONAL EXPERIENCE

Mathco — *Product Engineer - II (QA)* Bengaluru, India | Aug 2025 - May 2026

Project Focus: Abbott AI Chatbot (supporting Leadless/LLPM and Transvenous/TVPM pacemaker operations for medical personas) & Mars Responsible AI (RAI) Governance Framework.

- Validated AI chatbot responses using RAG-based architectures, collaborating closely with AI Engineers to systematically verify retrieval accuracy, grounding parameters, and hallucination control metrics.

- Evaluated large language model (LLM) outputs utilizing RAGAS metrics, analyzing Answer Relevancy, Context Precision, and Faithfulness to consistently improve platform reliability.
- Conducted extensive end-to-end functional, regression, and API testing tracks utilizing Swagger tools to thoroughly validate chatbot messaging workflows and backend service integrations.
- Leveraged Claude Sonnet and GitHub Copilot to drive test case generation, identify edge cases, and optimize QA workflows, significantly reducing manual effort and improving testing efficiency.

Songdew Media Pvt Ltd. — *QA Engineer* Gurugram, India | Aug 2024 - Jul 2025

Project Focus: Songdew global music management, promotion, subscription, and distribution ecosystem empowering independent artists.

- Designed and implemented modular, scalable automation frameworks using Selenium WebDriver, Java and Cucumber BDD, minimizing manual testing overhead across an AngularJS platform architecture.
- Analyzed comprehensive functional software criteria and test plans delivered by product teams to derive granular test cases, ensuring 100% verification coverage across target functional scopes.
- Led User Acceptance Testing (UAT) pipelines, successfully identifying structural UI anomalies and incorrect functional error messaging paths to secure high-quality end-user experiences.
- Partnered directly with engineering squads inside Agile workflows to efficiently manage core bug lifecycles, isolate defects using Jira, and verify production-ready source branches.

Hudson's Bay Company (HBC) — *QA Engineer* Bengaluru, India | Apr 2022 - Jul 2023

Project Focus: The Bay & Zellers (Canadian e-commerce retail networks under Hudson's Bay Company architecture).

- Performed comprehensive automated and manual testing sweeps across web portals, mobile web, iOS, and Android applications, ensuring broad functional coverage pre and post-deployment.
- Worked on Selenium automation scripts using Java and TestNG for cart, search, product array, and product description modules within an existing automation framework.
- Validated dynamic frontend UI configurations optimized for ReactJS frameworks while confirming database accuracy and data persistence layers utilizing custom SQL verification queries.
- Leveraged LambdaTest to execute cross-browser and real mobile device verification workflows, ensuring cross-platform responsive design integrity.
- Conducted backend functional API testing protocols leveraging REST architectures and Postman environments to isolate system communication blockages.

EDUCATION

Bachelor of Engineering in Mechanical Engineering Graduated: 2021

Don Bosco Institute of Technology
